测试产品的燃烧行为(不燃建筑材料)

产品描述

测试产品的燃烧行为（不燃建筑材料）

此设备对建筑材料进行测试并评估其燃烧行为。样品放置于 750°C 的加热炉内。加热炉是由支架、空气稳流器、加热器线圈、热电偶和样品夹具组成。由软件控制炉温并进行数据采集。软件控制加热炉的整个加热阶段，还可按照标准进行计算和评估。

Characteristics

Testing the burning behavior of products (non-combustible construction materials)

The device tests construction materials and assesses their burning behavior.

The specimen are lowered into an oven with a temperature of 750°C. The oven is basically composed of the rack, the heater winding, thermocouples, ignition flame and the specimen holder. The oven temperature and the data collection is software-controlled. The software controls the heating phase of the oven and provides calculations and evaluations of the standard. The power supply for the heater winding is given by a switching power supply unit and a pulse-width modulation. The power supply for the controller is provided by an IEC-320 AC power cordset 230 VAC (50/60 Hz).
